

Team MVPL

Maya, Valerie, Peter, Lia

Our project is an interactive tool that helps students walking alone at night feel safe, because walking alone is unavoidable. The project will help students feel safe by connecting them to their safety circle and showing them the safest routes to get home. The safety circle (SC) is a group of people that the user has chosen that will receive notifications about the user's safety. The map component will show the user the safest path by providing information such as dangerous marked streets and well-lit areas. All of these elements combined will create a safer experience while walking alone at night.
